

Orange break lines

If you want the orange break lines in the title slide and for the slides with class `inverse`, you need to manually insert them using

```
<html>
  <div style='float:left'></div>
  <hr color='#EB811B' size=1px width=720px>
</html>
```

Simply put this code directly in the `title` field of the YAML header and in the body of an `inverse` slide class.
